

M&M Poultry's PCL1000 Conveyor Lubricator

CONVEYOR LUBRICATOR

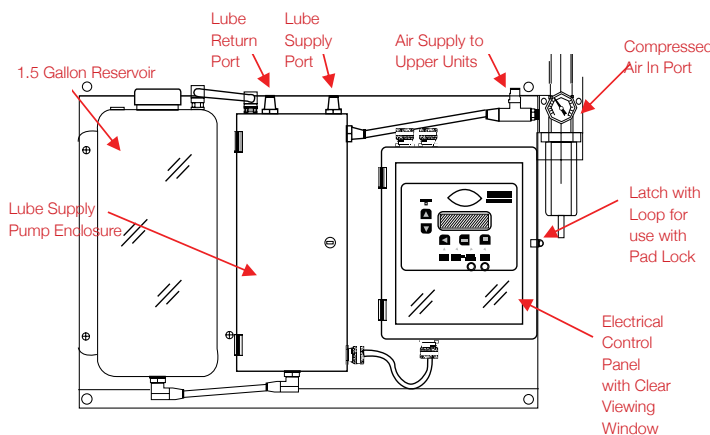

Upper Lubricating Head

This lubrication system for poultry trolleys and chain with trolleys on 6" centers is designed for "1" beam style straight track with bolted or rivet-less type 3" pitch chain. The machine consists of

two lubricating heads and one supply pump controller for operation of both dispensing heads. All enclosures are NEMA4X SS. Each upper dispensing head has four measuring dispensers, and lubricates trolleys inside out, outside in and the chain. The signal to lubricate the two chain pins is from the trolley lube proximity sensor. Lubricator includes pre-modified straight track section to be welded

in place. The Lower Unit of lubrication system has a 1 1/2 gallon reservoir, supply pump, and NEMA4X stainless steel enclosures. It also contains

a power on light, low level light, and push buttons for operation of upper dispensing heads. Lubricator requires compressed air and 120 v.a.c. Includes 50 ft. of tubing and wires for connecting lower unit to the upper dispensing head. All connecting wires will be 24VDC.

Lower Supply Pump & Controls

PCL1000 Specifications

LUBRICANT	For use with Purity Food Grade White Oil #15.
AMBIENT TEMPERATURE	35 to 140°F
FLOAT SWITCH	With flashing low level light.
LUBRICATES	Trolley and Chain Pins
ANTI-DRIP NOZZLES	Each nozzle has a check valve to eliminate dripping.
CONVEYOR SPEED	1 to 90 ft. per minute
NOZZLES	All nozzles are constructed with 1/4" O.D. SS Tubing for ultimate rigidity and corrosion resistance.
ELECTRICITY	120 v.a.c. 50/60 Hz, All connecting wires are 24VDC.
COMPRESSED AIR	80 p.s.i. minimum
SHOT VOLUME	Adjustable
CONVEYOR TRAVEL	Either or both directions.
VOLUME CONTROL	Each nozzle can be adjusted from 0-.002 c.i.
AUTOMATIC	Only lubricates when operator opens control panel and activates the lube cycle for Unit 1 or Unit 2. Machine can be programmed to lubricate for a set amount of time or continuously.
MATERIALS	Stainless steel enclosures and frame. Fittings are brass and stainless.
