

M&M Poultry Bearing Housing for the Meyn Auto-Rehanger Final Cut*

The M&M Poultry Bearing Housing engineered specifically for the Meyn Auto-Rehanger Final Cut* incorporates the design technology of M&M's revolutionary Triple Option Picker Hub (patent pending) into a compact hub package. With the proven dependability of M&M's Triple Option Picker Hub, the new Bearing Housing's "Bearing Isolator" design isolates the internal components of the hub from contaminants. The Bearing Housing runs cooler and lasts considerably longer, offering a maintenance free operation.

The M&M redesigned Bearing Housing for the Meyn Auto-Rehanger Final Cut* reduces downtime for maintenance and significantly reduces replacement and rebuilding costs. M&M Poultry's innovative hub design also prevents your line from running with bad hub bearings causing downgrades or production slowdowns due to short or miscut hocks. For more information contact your sales representative today.
